```python
# Define a function to print even numbers
divided by 2
def print_even_numbers_divided_by_2(n):
    """

    Prints even numbers from 2 to n
(inclusive) divided by 2.

    Args:
        n (int): The upper limit (inclusive).

    Returns:
        None
    """
    for i in range(2, n + 1, 2):
        result = i / 2
        print(f"{i} divided by 2 is {result}")

# Example usage:
print_even_numbers_divided_by_2(10)
```
